

Move your liquid assets more efficiently.

Lift truck attachments for all your beverage handling needs.

Whether you're moving beer kegs, Bordeaux or bottled water, Cascade makes an attachment to handle it.

Cascade Cascade Corporation has a long history of designing products to help solve materials handling problems and improve handling productivity. Our commitment to quality and customer satisfaction has made us the leading worldwide manufacturer of lift truck attachments and related products.

Cascade attachments allow your drivers to work more efficiently and productively by tailoring your lift truck to your exact application requirements. The net result is lower material handling costs and a higher return on your lift truck investment.

For more information on how Cascade lift truck attachments can help you move your liquid assets efficiently, contact your lift truck dealer. If you don't see what you're looking for, call us at **31-36-5492911** or visit our website, **www.cascorp.com**.

Single-Double Pallet Handlers

Use the same lift truck to handle either single or double pallet loads. These highly versatile attachments allow you to achieve the productivity gains of double load handling without sacrificing the ability to handle single pallets. Forks are hydraulically positioned for fast and efficient material handling.

Single-Double-Triple

Built to handle either single, double or triple pallet loads. These highly versatile attachments allow you to achieve the productivity gains of double or triple unit load handling without sacrificing the ability to handle single pallets. Forks are hydraulically positioned for fast and efficient material handling. Well suited for truck trailer loading and unloading.

Push/Pulls

Push/Pulls allow you to ship, receive and warehouse unit loads on inexpensive slip sheets rather than pallets. Using slip sheets eliminates the cost of pallet purchase, maintenance, disposal and storage while increasing cube utilization.

Carton Clamps

Carton Clamps allow palletless handling, which saves money on pallet purchasing, maintenance, shipping and storage. Also improves warehouse space utilization. Used mostly in the beverage industry to handle soda machines or unit loads of wine.

Load Stabilizers

Load Stabilizers secure palletized loads during transport and are used in many segments of the beverage industry. Load Stabilizers improve handling speed and reduce product damage, particularly in operations with rough floors or outdoor travel requirements.

Layer Picker

Beverage warehouses and distribution facilities can benefit from the speed and versatility of the Layer Picker. When building mixed load pallets, the Cascade Layer Picker handles single or multiple layers of both canned and bottled product, eliminating costly manual labor.

Whatever the application, we can handle it.

Double Sideshifters

Double Sideshifters are generally specified for applications that handle double unit loads exclusively. Double unit load handling allows you to virtually cut your handling, loading and unloading time in half. The driver can pick loads that are separated, bring them together, sideshift both loads, and spread them.

Beer Keg Clamp

Two model offerings allow you to handle either 18 full barrel kegs or 36 empty barrel kegs. The Beer Keg Clamp provides a safe and efficient method for loading and unloading trailers at breweries, distributors and warehouse operations. Telescopic top stabilizer.

Wine Barrel Handler

Designed to work in the "cave" or "narrow aisle" operations, the Wine Barrel Handler allows a lift truck driver to easily grab a barrel from a stack, lower it to the ground or move it to the desired location. A 180-degree pivoting fork assembly mounted on a full width traversing frame allows the driver to pick up a barrel from either the left- or the right-hand side of a narrow aisle.
